Description

Window Jetkleer is an advanced formula window cleaner that is non-streaking and safer to use than most products available today. *Window Jetkleer* has excellent lubricity and is easier to wipe clean with its “static release” feature, resulting in a one-step cleaning process. Windows in an industrial environment where atmospheric dust clings to glass are now easily cleaned with *Window Jetkleer*.

Window Jetkleer meets AMS 1535B specs and has been approved for use on KC-135, J-STARS (E-8) and C-130 aircraft in USAF Technical Orders. *Window Jetkleer* can be used on:

- Aircraft windows
- Commuter rail windows
- Bus windows
- Industrial environment windows
- Any and all glass and plastic surfaces where industrial strength cleaning is needed.

Use Directions

Spray undiluted *Window Jetkleer* lightly onto surfaces to be cleaned. Do not over spray. Wipe dry with a clean, lint-free cloth or paper towel.

IMPORTANT: Before using *Window Jetkleer*, always be sure to read and follow warnings and directions for use appearing on the product container label and MSDS.
